Ceramic CPU Scrap: Bulk Wholesale for Refiners and Recyclers

Whole ceramic-packaged processors supplied by weight in bulk lots to refiners, recyclers and trading companies. Every quotation is prepared individually after buyer and destination review.

What is ceramic CPU scrap?

Ceramic CPU scrap consists of processors built in a ceramic package, typically older-generation pin-grid-array parts. The body is ceramic, the underside carries rows of pins, and many parts have a metal lid.

Why buyers look for it

Refiners and recyclers value this material for the metal plating on pins, lids and internal contacts. The amount of recoverable metal differs by processor family and by lot, which is why no yield figure is published without a documented assay.

How the grade is described and supplied

Grading by form

Lots are described by visual grade and sold by weight. Composition and condition are described per lot during review rather than promised in advance.

Variants

- Pin-grid ceramic, standard
- Ceramic with metal lid
- Ceramic, mixed generations

Packaging

Packed by weight in sealed drums or cartons. The exact packaging is confirmed in the quotation.

Specifications

Identification	
Material class	Ceramic-packaged microprocessors
Package	Ceramic body, typically pin grid array
Typical features	Pins on the underside; metal lid on some parts
Form	Whole processors, as received
Sold by	Weight (kg)

Commercial terms	
Pricing	Quoted individually in USD per kg; no list price
Minimum order	Set per lot in the quotation
Lead time	Confirmed per lot
Delivery terms	Incoterms® 2020, named place stated in the quotation
Payment terms	Stated in the quotation
Origin	Confirmed in the quotation

Quality and documentation	
Assay	Provided only where a documented assay exists for the lot
Recovery / yield	Not stated; depends on the lot and on the buyer's process
Inspection	Options discussed during the quote process, depending on the lot
Quotation	Numbered PDF with revision history

Compliance	
Buyer review	Business and destination are reviewed before any quotation
Classification and permits	Material classification, export and import permissions are reviewed case by case; no destination is pre-approved

Scope of the grade

Included

- Whole ceramic-package processors
- Intact pins and lids as received

Not included

- Batteries and capacitors
- Non-CPU boards and loose components
- Material of undocumented origin

General handling guidance

- Store indoors and keep dry.
- Keep grades separate so the description stays accurate.
- Wear gloves when handling loose pins and metal edges.
- Follow local regulations for the storage and transport of electronic scrap.

This data sheet gives general information about the grade as a material class. It is not a certificate of analysis, a quotation, an offer or an approval to ship. Values for a specific lot (weight, availability, assay, lead time) are given only where they have been verified and are always confirmed in the quotation. Images are illustrative and do not depict current stock.
