Fiber CPU Scrap: Organic-Substrate Processors in Bulk

Whole processors on a fiberglass-type (organic) substrate, supplied by weight in bulk to recyclers. Graded and traded separately from ceramic scrap; quoted individually.

What is fiber CPU scrap?

Fiber CPU scrap consists of processors built on a fiberglass-type (organic) substrate rather than ceramic. It is a different material from ceramic scrap and is graded and traded separately.

How it differs from ceramic scrap

The processor body is made of a different material, which changes how buyers value and process it. Composition also differs between processor families, so details are described per lot during review.

How the grade is described and supplied

Grading by form

Fiber lots contain fiber-type processors only. Mixed lots are sold under Mixed CPU Scrap.

Variants

- Fiber CPU, standard
- Fiber CPU, mixed generations

Packaging

Packed by weight in sealed drums or cartons. The exact packaging is confirmed in the quotation.

Specifications

Identification	
Material class	Processors on fiberglass-type (organic) substrate
Package	Organic substrate; contacts on the underside
Typical features	Metal heat spreader on some parts
Form	Whole processors, as received
Sold by	Weight (kg)

Commercial terms	
Pricing	Quoted individually in USD per kg; no list price
Minimum order	Set per lot in the quotation
Lead time	Confirmed per lot
Delivery terms	Incoterms® 2020, named place stated in the quotation
Payment terms	Stated in the quotation
Origin	Confirmed in the quotation

Quality and documentation	
Assay	Provided only where a documented assay exists for the lot
Recovery / yield	Not stated; depends on the lot and on the buyer's process
Inspection	Options discussed during the quote process, depending on the lot
Quotation	Numbered PDF with revision history

Compliance	
Buyer review	Business and destination are reviewed before any quotation
Classification and permits	Material classification, export and import permissions are reviewed case by case; no destination is pre-approved

Scope of the grade

Included

- Whole organic-substrate processors

Not included

- Ceramic processors (see Ceramic CPU Scrap)
- Batteries and loose components
- Material of undocumented origin

General handling guidance

- Store indoors and keep dry.
- Keep grades separate so the description stays accurate.
- Wear gloves when handling loose pins and metal edges.
- Follow local regulations for the storage and transport of electronic scrap.

This data sheet gives general information about the grade as a material class. It is not a certificate of analysis, a quotation, an offer or an approval to ship. Values for a specific lot (weight, availability, assay, lead time) are given only where they have been verified and are always confirmed in the quotation. Images are illustrative and do not depict current stock.
