TECHNICAL DATA SHEET

Gold-Plated CPU Pins

Scrap Cove

Document TDS-PIN-01
Revision 1.0
28 October 2026

Illustrative image, not a photograph of current stock.

Gold-Plated CPU Pins: Bulk Supply by Weight

Pins separated from processor packages and supplied loose in bulk, for buyers whose process starts from pin material. Quoted individually after buyer and destination review.

What are gold-plated CPU pins?

Gold-plated CPU pins are the slender contact pins removed from processor packages. They are supplied loose, by weight, and suit buyers who want pin material rather than whole processors.

Plating and assay

Plating thickness varies by source part. A figure for gold content is shown only where a documented assay exists for the specific lot; otherwise none is given.

Sorting, packaging and supply

Variants

- Loose pins, sorted
- Loose pins, unsorted

Packaging

Packed by weight in sealed containers. The exact packaging is confirmed in the quotation.

Process details

How a lot was produced and what it contains are shared during review, so that the description matches the material.

Specifications

Identification	
Material class	Loose electronic connector pins
Source	Separated from processor packages
Form	Loose pins, sorted or unsorted
Plating	Gold plating; thickness varies by source part
Sold by	Weight (kg)

Commercial terms	
Pricing	Quoted individually in USD per kg; no list price
Minimum order	Set per lot in the quotation
Lead time	Confirmed per lot
Delivery terms	Incoterms® 2020, named place stated in the quotation
Payment terms	Stated in the quotation
Origin	Confirmed in the quotation

Quality and documentation	
Assay	Provided only where a documented assay exists for the lot
Recovery / yield	Not stated; depends on the lot and on the buyer's process
Inspection	Options discussed during the quote process, depending on the lot
Quotation	Numbered PDF with revision history

Compliance	
Buyer review	Business and destination are reviewed before any quotation
Classification and permits	Material classification, export and import permissions are reviewed case by case; no destination is pre-approved

Scope of the grade

Included

- Loose pins separated from processors

Not included

- Whole processors
- Mixed electronic scrap
- Material of undocumented origin

General handling guidance

- Store indoors and keep dry.
- Keep grades separate so the description stays accurate.
- Wear gloves when handling loose pins and metal edges.
- Follow local regulations for the storage and transport of electronic scrap.

> This data sheet gives general information about the grade as a material class. It is not a certificate of analysis, a quotation, an offer or an approval to ship. Values for a specific lot (weight, availability, assay, lead time) are given only where they have been verified and are always confirmed in the quotation. Images are illustrative and do not depict current stock.
